(57) Abstract:

PROBLEM TO BE SOLVED: To make the package of a program be in common by inputting common data processed by a processing part from the processing part, converting them to data used by respective systems and outputting them.

SOLUTION: The data 2005 individually corresponding to respective offices are converted to the common data 2030 by a first mapping part 2010. For instance, the addition of an item included in the common data 2030 and not included in the data peculiar to the office is processed by the first mapping part. Then, by selectively executing a sub processing part, the respective offices are coped with as well and a main program in common to all the offices is prepared by the processing part 2040 turned common and the common data 2030 and executed. The common data 2030 after a processing are converted to the data 2005 corresponding to the respective offices by a second mapping part 2020. In the conversion processing of the second mapping part 2020, the
